ATTENTION: Safety or Health Coordinator

Dear Valued Customer,

Enclosed are Material Safety Data Sheets for “articles” that we distribute which you may have purchased or ordered that may be subject to OSHA Standard 29 C.F.R 1910.1200. Each Material Safety Data Sheet has been updated to reflect the most recent significant information in our possession as of the date of the MSDS Sheets.

These “articles”, as distributed by TW Metals, in their usual physical or natural state do not present an inhalation, ingestion, or contact hazard. However, when subject to welding, burning, grinding, cutting, heat treatment, machining, abrasive blasting or similar operations, potentially hazardous fumes or dust may be emitted. Dust or fumes must be maintained below the permissible exposure levels established by OSHA.

The information on the Material Safety Data Sheets should be used for health and safety training only, not for specification purposes. These sheets summarize the product health and safety information provided to us by our vendors.

Should you require any further information or data, please contact this office or any TW Metals location.

Very truly yours,

A handwritten signature in black ink, appearing to read 'Jack Elrod', with a large, stylized loop at the end.

Jack Elrod
